

Palo Alto Networks Continues Rollout of Fourth-Generation Hardware With the PA-3400 and PA-5400 Series ML-Powered Next-Generation Firewalls

February 9, 2022

Protection for the smallest branch, largest data center, campus and enterprise edge with 3x better security performance

SANTA CLARA, Calif., Feb. 9, 2022 /PRNewswire/ -- Palo Alto Networks (NASDAQ: PANW), recognized as a [10- time leader in network firewalls](#), today announced the [PA-3400 and PA-5400 Series](#) ML-Powered Next-Generation Firewalls (NGFWs) — offering three times better security performance over the previous generations. The PA-3400 and PA-5400 Series join Palo Alto Networks other fourth-generation NGFWs to provide extraordinary protection for the data center, internet edge and campus.

PA5430_FrontWtop"With bandwidth demands rising and attackers getting ever more sophisticated, customers' firewall demands are constantly increasing," said Lee Klarich, chief product officer, Palo Alto Networks. "Our fourth-generation hardware now ranges to serve all of our customers whether they are looking to protect the smallest branch or the largest data center, campus, or enterprise edge."

The PA-3400 and PA-5400 Series NGFWs deliver faster prevention and better evasive threat detection. Compared to the previous generation, the PA-5400 Series has seven times content inspection per core and up to 38 high-performance cores. The PA-3400 Series has close to four times content inspection per core and up to 19 high-performance cores.

With up to a 50% reduction in rack space usage and increased energy efficiency, these new firewalls can help make organizations' IT infrastructure more sustainable and environmentally friendly.

Availability

The new NGFWs and [PAN-OS® 10.2 Nebula](#) are expected to be available in March.

More Information
